The following is the description of the Zigbee **{layer}** message **{message_name}**.
{message_description}

Focus especially on attributes that represent: internal state changes, table or counters, membership tracking, effects on reporting, scenes, or other clusters.

Please determine all potential state attributes or variables that could be affected by the message. If so, return the names of these attributes. Otherwise, return an empty list.

The answer should be organized in **JSON** format. The following is an example of the result of a ZCL message AddGroup.
{"Attributes": ["group_count"]}

(a) The prompt to discover the hidden state attributes.

The following is the list of device state attributes. **{state_attribute_list}**.
The following is the description of the Zigbee **{layer}** message **{message_name}**.
{message_description}

Please determine the attributes in the state list that the message can read, write and report respectively. If so, return attribute names. Otherwise, return an empty list.

The answer should be organized in **JSON** format. The following is an example of the result of a ZCL message MoveToHueAndSaturation.
{"Read": [], "Write": ["transition_time", "current_hue", "current_saturation"], "Report": []}

(b) The prompt to acquire all message-readable, writable and reportable attributes.
